GEOLOGY GROUPS EXPLORE WESTERN SERBIA;  
 FIND NEW KAOLIN DEPOSITS IN BULGARIA

CHECK GEOLOGICAL MAPS -- Zagreb, Borba, 7 Aug 51

Fourteen groups from the Geological Institute of the Serbian Academy of Science have just completed exploring western Serbia. Over 60 scientists and assistants worked in the vicinity of Gornji Milanovac, Takovo, Smederevo, Rebelj, Kosjerick, Pozega, and other places. Their main mission was to check existing geological charts and make new charts of this area.

The group collected much fossil material of stratigraphic and paleontological significance, and ethnological and mineralogical materials from many previously unexplored areas.

DISCOVER NEW ASBESTOS DEPOSITS -- Zagreb, Vjesnik, 16 Jun 51

In Kavadar Srez, exploratory work has been in progress to discover asbestos ore. New explorations of the Dobriniste mine near Ibarac have uncovered rich deposits of good-quality chrysotile asbestos. Geologists believe asbestos is also present near Majdan, Klinovo, Kumanicevo, and Galiste.

NEW KAOLIN DEPOSITS DISCOVERED IN BULGARIA -- Sofia, Trud, 13 Sep 51

New kaolin deposits have been discovered by Ivan Ivanov Kishkinov, director of the mine in Senovo, near the old kaolin mine in Senovo, Razgrad Okolija. However, these deposits were unexploitable. Later, Kishkinov discovered other such deposits, which were exploitable and which made the fulfillment of the 1951 plan of the Senovo mine possible.
